DETAILED ACTION

Applicants cancellation of claims 1-18 and addition of claims 19-36 is acknowledged.

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 19-27, drawn to a HCV polymerase polypeptide, classified in class 435, subclass 194.
- II. Claim 28, drawn to a DNA encoding an HCV polymerase, classified in class 536, subclass 232.
- III. Claims 29 and 32, drawn to a method for determining the three-dimensional structural coordinates of a variant of HCV polymerase, classified in class 435, subclass 15.
- IV. Claims 30-33, drawn to a method of identifying an HCV polymerase inhibitor, classified in class 435, subclass 15.
- V. Claims 34-36, drawn to HCV polymerase inhibitors, classification unknown as the specification discloses no structural information for the claimed compound. Possible classifications could be class 260 (organic compounds), Class 530 (proteins), Class 536 (carbohydrates), Class 423 (inorganic compounds) etc.

The inventions are distinct, each from the other because of the following reasons:

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II and V are unrelated. Inventions are unrelated if it can be shown

that they are not disclosed as capable of use together and they have different modes of operation, different functions, or different effects (MPEP § 806.04, MPEP § 808.01). In the instant case the HCV polymerase of Group I, and the nucleic acid encoding the HCV polymerase of Group II and the HCV inhibitor of Group V each comprise a chemically unrelated structure capable of separate manufacture, use and effect. The polypeptide of Group I is comprised of amino acid sequence and the DNA of Group II is comprised of nucleic acid sequence, while the HCV inhibitor of Group V is not defined structurally. The DNA has other utility besides encoding protein such as a hybridization probe, and the proteins can be made synthetically. Additionally, the protein can be used to perform specific biological function(s) which are independent of the function(s) of the DNA molecule. The protein has other utility such as for the method of Group IV.

Inventions I and III or IV are related as product and process of use. The inventions can be shown to be distinct if either or both of the following can be shown: (1) the process for using the product as claimed can be practiced with another materially different product or (2) the product as claimed can be used in a materially different process of using that product (MPEP § 806.05(h)). In the instant case the HCV polymerase can be used for either of the methods of Groups III or IV or alternatively to generate antibodies against the polypeptide.

The DNA of Group II, the inhibitor of Group V are unrelated to the methods of Group III or IV as they are neither used nor made by the methods of Group III or IV.

Because these inventions are distinct for the reasons given above and the search required for Groups I through V are not coextensive, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a petition under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
